Prior arts of record does not disclose a device for detecting the pattern of polynucleic acid hybridization to a surface. The device comprises: a nucleic acid chip holder, a light source, wherein the sampling position is a position that places the sample surface of the chip in a well defined spatial relationship relative to the electronic light detector array so that the source light that touches a chip address on the sample surface is substantially directed to substantially one detector pixel with an address that is correlated to the chip address which structurally arranged and functionally operated as claimed in claims 1,27,41,67,88.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
